

Here Api :

MainForm

PanelTop

When buttonclick =

hide Current Div....

show Div bellow

corresponding to button

DivHome (AIClient)

DivDemandes(AIClient)

- DivList
- DivWorkSpace
 - o Panel Top (Map)
 - o Panel client (Liste des Offres)
- DivCR

DivOffres(AIClient)

DivContacts(AIClient)

The screenshot shows a web browser window with the URL 'localhost:8080/aReaWeb'. The interface includes a navigation bar with buttons for 'Home', 'Demandes', 'Offres', and 'Contacts'. Below this is a 'Mes Demandes' section with a 'Liste' button and a search bar. A 'Critères de Recherche' section follows, containing a search bar and a map of Paris. The map is centered on Paris and shows various districts and streets. Below the map is a 'Liste des Offres' section. A text box on the right side of the screenshot contains the following text:

For each panel I've a subform created when created parent.
The funny thing is that the map can be drag only whe mouse is here
In the margin of this div.
